Show Horse Vaccination and Health Chart

Use this chart to record your horse's health record.

Horse:

	<u>Winter</u>		<u>Spring</u>			<u>Summer</u>			<u>Fall</u>			<u>Winter</u>
	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Rabies												
EEE												
WEE												
West Nile												
Tetanus												
Rhino												
Influenza												
Strangles												
Coggins												
Dental												
Sheath Clean												
Deworming												

We recommend that a majority of the vaccinations be given in the spring and the fall, about six months apart. Eastern and Western Encephalitis, and West Nile should be given twice a year. Rhino and Influenza should be given every 3 months to insure adequate protection since these horses are at a much higher exposure and risk. Rabies should be given once a year as well as Strangles (if desired). Shaded areas indicate the recommended time of year for an average adult show horse to receive each vaccination. The Coggins test and Dental Float can be performed at any time of year with the sheath cleaning performed at the time of the dental. However, we prefer to perform your horse's Dental Exam and/or Power Float during the fall months to ensure that your horse is eating and grinding his/her food properly during the harsher winter months. We recommend de-worming at approximately 8 week intervals, rotating the type of de-wormer used. For a copy of our recommended rotation for de-wormers please call or ask for a schedule. For any other questions about your horse's health care please call our office (972) 382-8331 or ask one of our veterinarians for further recommendations.
